

Programmer: Michael Benno

How it works:

- 1) The program will give you a menu list and the user will be told to input the number of the menu item. The user types in the number (and only the number)
- 2) Once the user inputs a number based on the action they would like to do, it will then give the instructions on to the task.
 - a) The actions will typically have another menu list to ask what they would like to do. Users will then input the numbers to do those tasks and be able to add, remove, edit contacts, etc.
 - b) The last number in each menu will have an exit option or otherwise be able to exit out of the option they chose.
 - c) If it doesn't give a menu to choose from, it will give instructions on what to input and the user will follow the prompts.
- 3) If the option chosen has a menu, the user must put in a number and follow the prompts.
- 4) Once all of the actions/prompts have been complete, it will bring you back to the main menu and you can choose from the options on what you would like to do with your contact list.
 - a) User may exit then.
